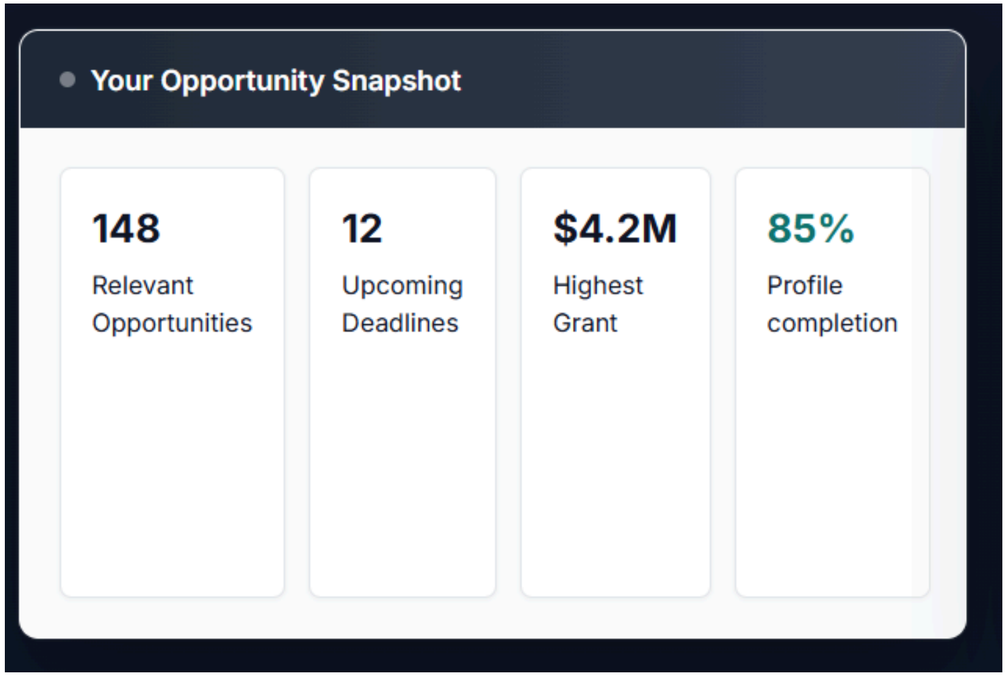
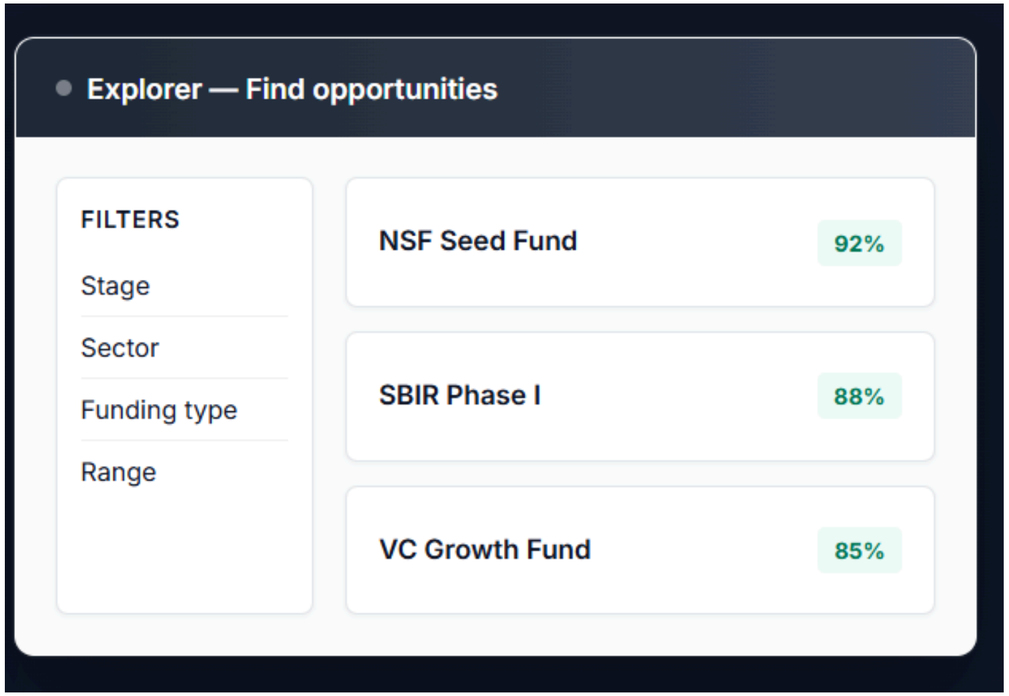
FundMe Frontend Flow

A Technical Overview





By Avni and Om

Current Discovery Process (Before FundMe)

Users previously relied on fragmented sources.

Founders

- Government grant portals
- Accelerator websites
- Startup newsletters
- LinkedIn announcements

Investors

- Ministry announcements
- Institutional networks
- Incubator programs

Problem

- Information scattered across multiple sources
- Difficult to track opportunities and deadlines.

OUR PRODUCT:

FundMe

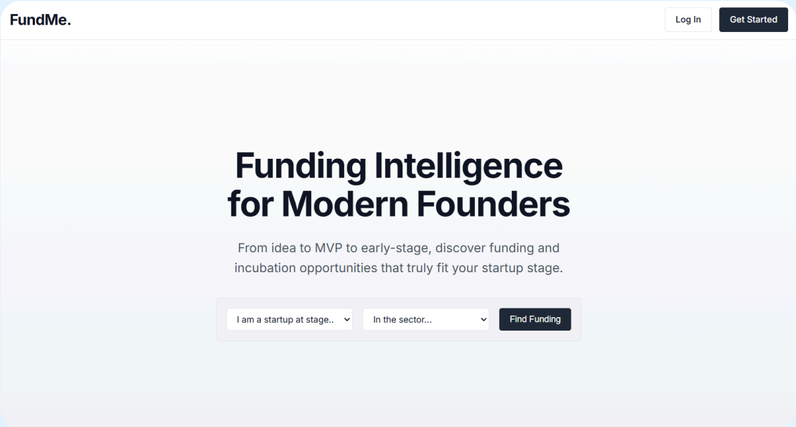
A platform that helps founders and investors navigate startup ecosystem opportunities.

What the platform enables:

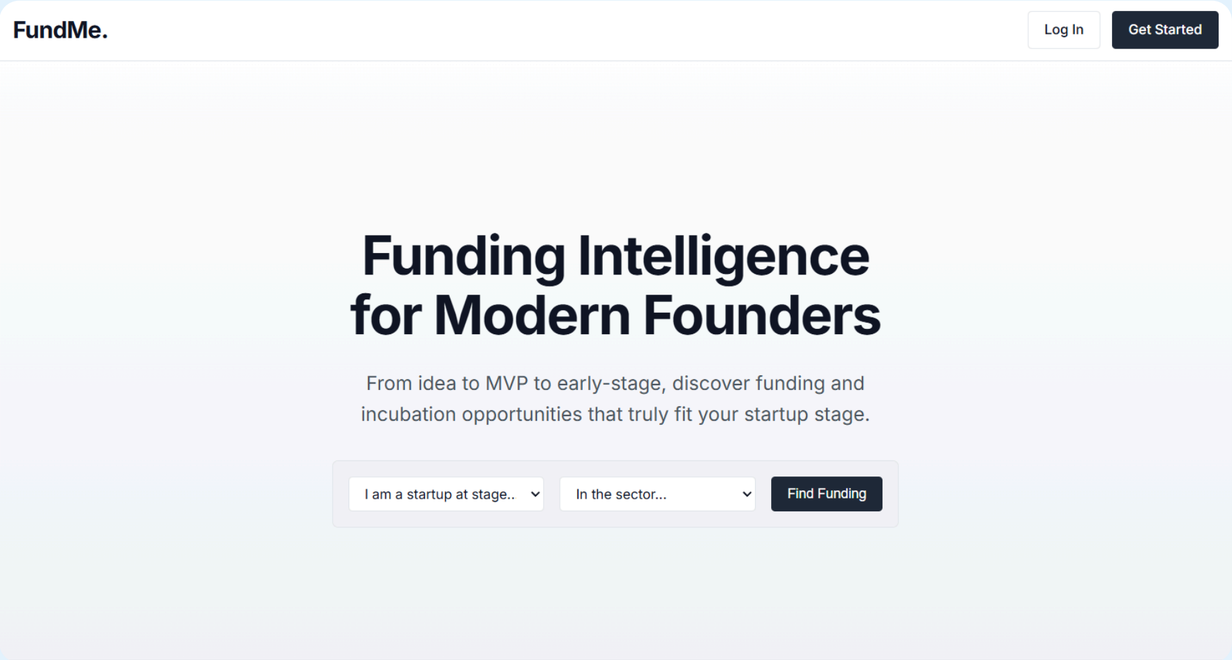
- Discover grants, incubators, and accelerator programs
- Explore eligibility and program details
- Apply to opportunities
- Track application progress

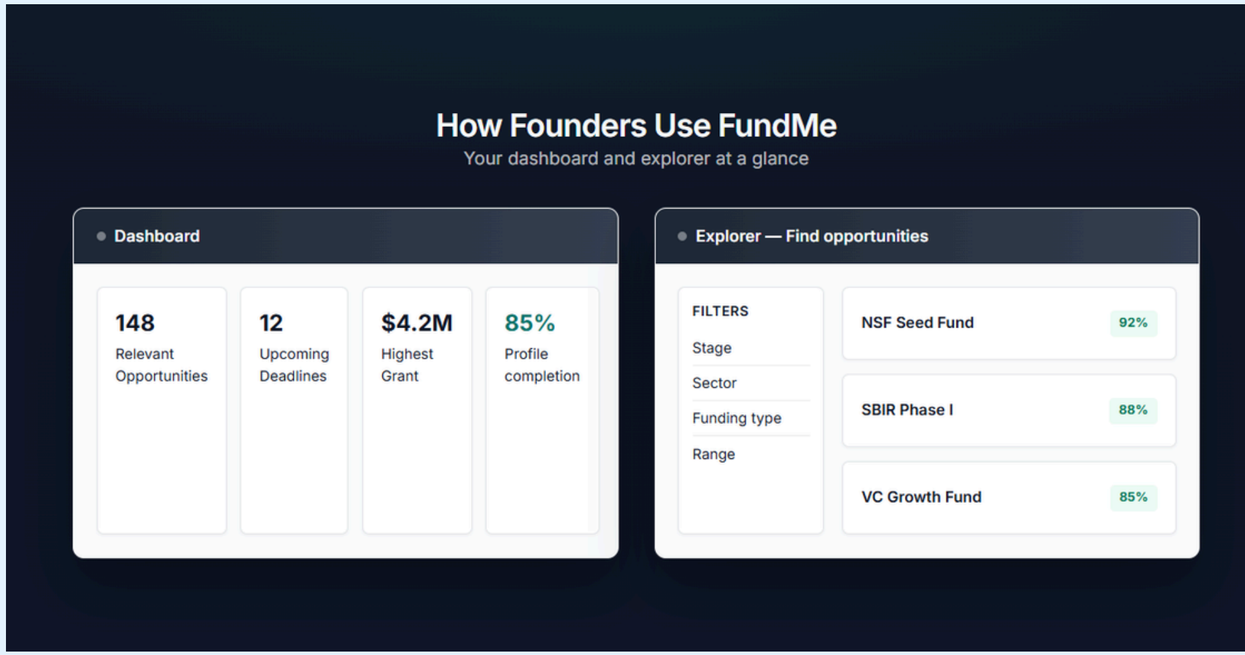
Goal

Provide clarity before founders apply to funding opportunities.



Lander Page: First-Time User Experience





- Explains the platform
- Shows who it's for
- Starts the user journey

- Gives a general overview of how founders use FundMe
- Shows main features founders interact with
- Helps users understand flow after signing up

User Onboarding

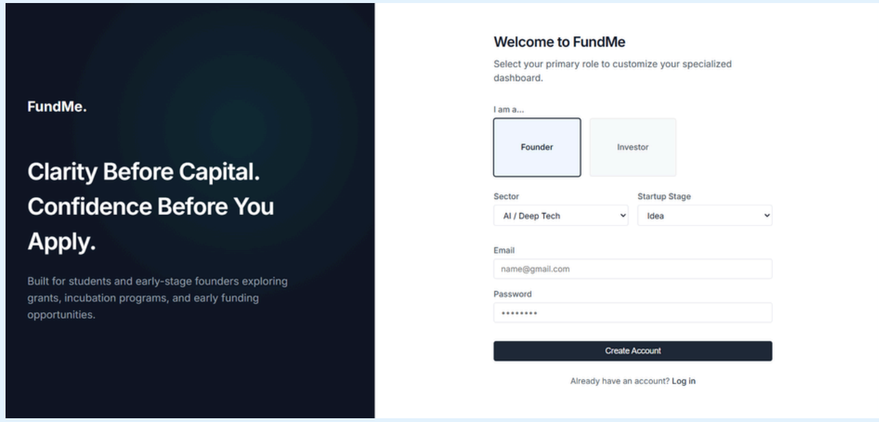
Users join the platform by selecting their role.

Founder onboarding

- Select startup sector
- Select startup stage
- Create account with email

Outcome:

Personalized opportunity discovery.

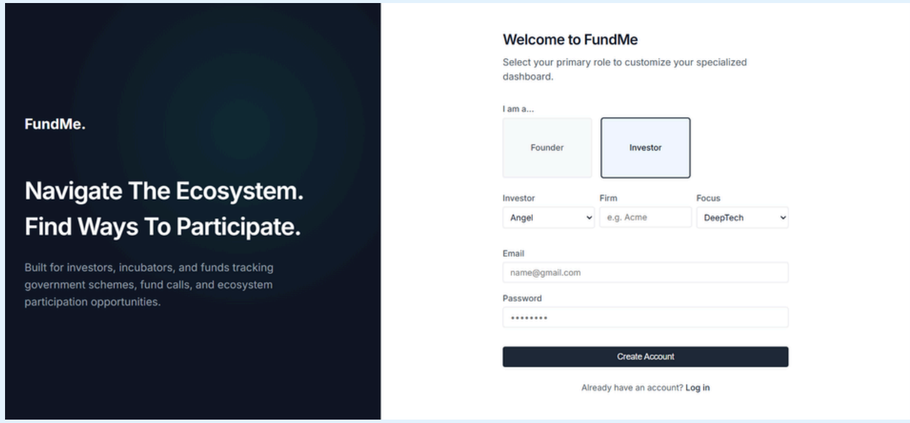


Investor onboarding

- Enter organization name
- Select investor type
- Select investment focus

Outcome:

Access ecosystem schemes and fund calls.

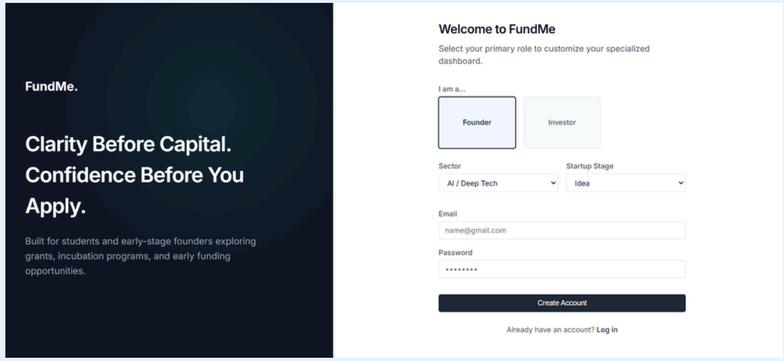


Founder User Journey – FundMe

Account Creation & Role Selection

- User signs up on the platform.
- Selects Founder as their role.
- Provides basic startup details such as:
  - Sector
  - Startup stage
  - Email and password.

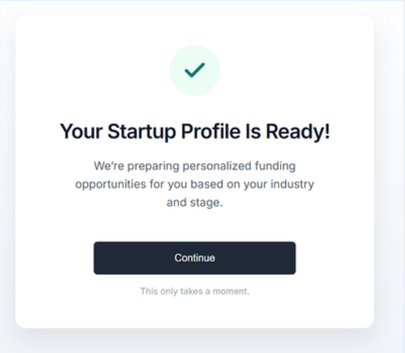
➡️ This helps the system personalize funding recommendations.



Startup Profile Initialization

- After signup, the platform prepares the startup profile.
- Initial information is used to generate relevant funding opportunities.

➡️ The system begins building a personalized funding discovery experience.

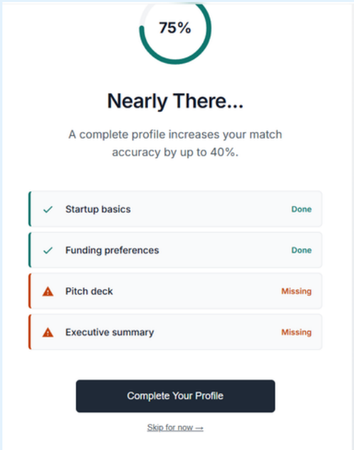


Profile Completion

Users are guided to complete key profile sections:

- Startup basics
- Funding preferences
- Pitch deck
- Executive summary

➡️ Completing these improves match accuracy for opportunities.

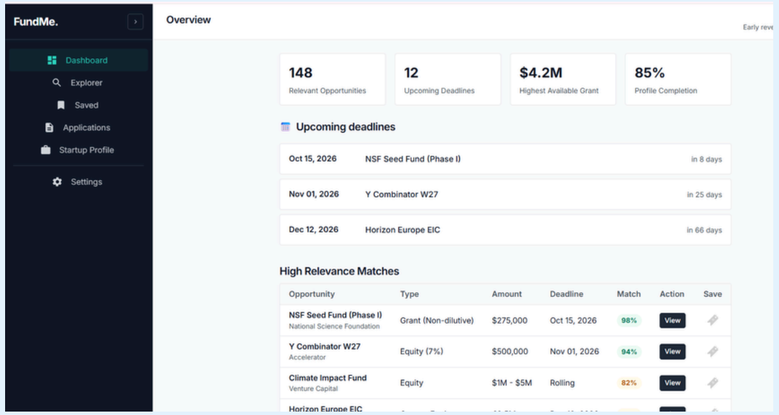


Founder Dashboard

The dashboard provides a quick overview of:

- Relevant funding opportunities
- Upcoming application deadlines
- Highest available grants
- Profile completion status

➡️ Helps founders track funding opportunities efficiently.



Opportunity Exploration

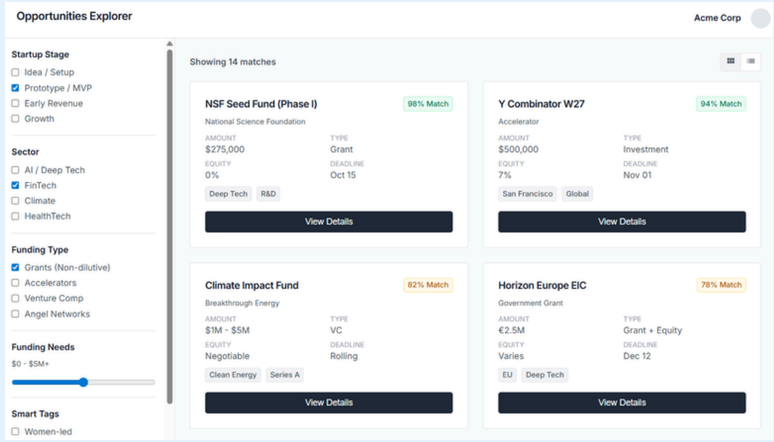
Founders can browse funding opportunities using filters:

- Startup stage
- Sector
- Funding type
- Funding amount

Each opportunity shows:

- Investment amount
- Deadline
- Match score
- Funding type.

➡️ Allows founders to discover highly relevant funding programs.

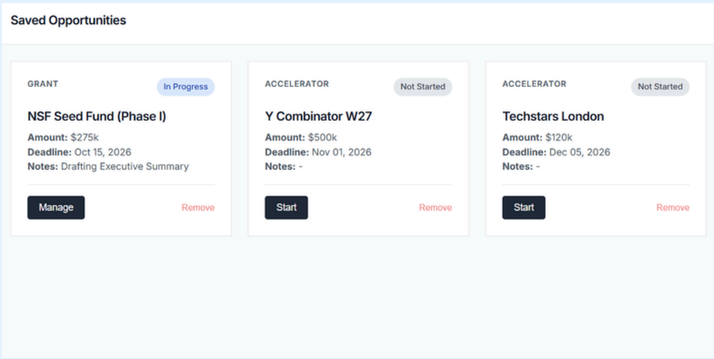


Saving Opportunities

Founders can save opportunities they are interested in.
Saved opportunities allow them to:

- Track deadlines
- Add notes
- Manage application preparation.

➡️ Helps founders organize their funding pipeline.



Application Tracking

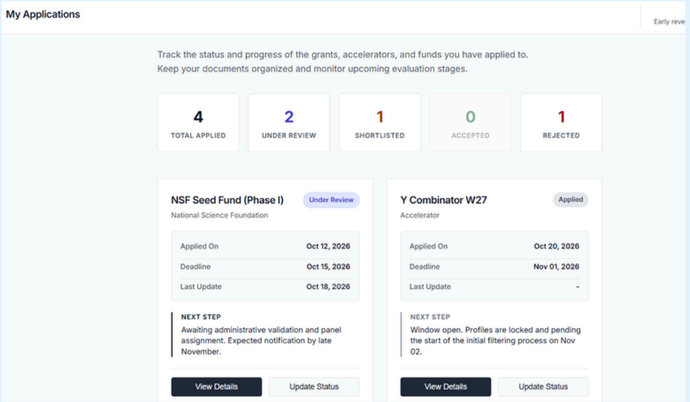
The application dashboard shows:

- Total applications
- Under review
- Shortlisted
- Accepted / Rejected

Each application displays:

- Submission date
- Deadline
- Current status
- Next steps.

➡️ Enables founders to track the progress of all applications in one place.

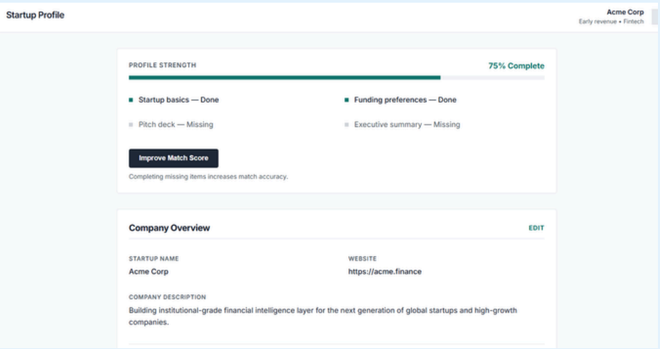


Startup Profile Management

Founders can manage their startup profile by:

- Updating company information
- Uploading pitch deck
- Improving profile strength.

➡️ A stronger profile improves funding match accuracy.

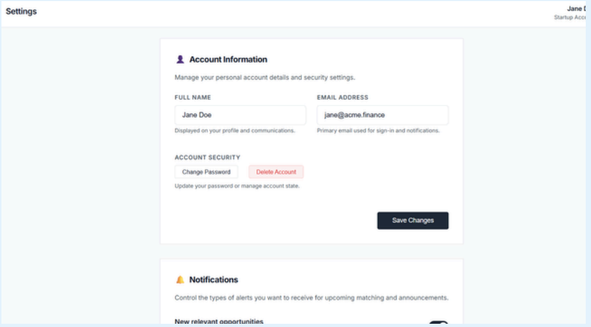


Account Settings

Users can manage:

- Personal information
- Password and security
- Notification preferences.

➡️ Ensures account control and communication preferences.



"Overall, FundMe guides founders from startup onboarding to discovering funding opportunities and tracking applications in a single streamlined platform."

Investor User Journey – FundMe

Investor flow:-

1. Complete investor onboarding
2. View Investor Dashboard
3. Explore Schemes & Incentives
4. Browse Fund Calls
5. Learn about Licensing & TBI recognition
6. Save opportunities to Watchlist

Purpose:-

Help investors identify relevant ecosystem programs.

User Problems → Why FundMe Screens Exist

1. Scattered funding information:
Solution: Dashboard + Opportunities Explorer(All funding in one centralized view)
2. Lack of clarity on eligibility
Solution: Onboarding + Explorer filters & match %(Users instantly see what fits their stage)
3. No guidance at early stages
Solution: Dashboard (High-relevance matches + deadlines)
4. Same experience doesn't work for all users
Solution: Role selection (Founder / Investor)
5. Missed deadlines & poor tracking
Solution:Upcoming deadlines + Saved opportunities

System Databases

Based on the platform screens, the system uses several core databases to manage user information and opportunity data.

Users Database

Stores authentication and role information.

Fields included:

- user_id
- email
- password
- role (founder or investor)

Founder Profile Database

Stores information related to startup founders.

Fields included:

- founder_id
- user_id
- startup_name
- sector
- startup_stage

Investor Profile Database

Stores information about investors or organizations.

Fields included:

- investor_id
- user_id
- organization_name
- investor_type
- investment_focus

Opportunities Database

The Opportunities database stores information about all programs available on the platform.

This includes grants, incubators, accelerators, and other funding programs.

Fields:

- opportunity_id
- opportunity_name
- organization
- description
- eligibility
- deadline
- application_link
- funding_type
- amount
- equity
- sector
- startup_stage

This database powers the Explorer page and Opportunity detail screens.

Applications Database

The Applications database tracks opportunities that founders have applied to.

Fields included:

- application_id
- user_id
- opportunity_id
- application_date
- current_status
- feedback

This database powers the Applications Tracker page where founders can monitor the progress of their submissions.

Saved Opportunities Database

The Saved Opportunities database stores opportunities that users bookmark for later review.

This allows founders to shortlist/save programs before applying.

Fields included:

- saved_id
- user_id
- opportunity_id
- saved_date

This table acts as a linking table between users and opportunities, enabling many users to save the same opportunity while each user can save multiple opportunities.

Initial API Endpoints

As the platform evolves, the frontend will communicate with the backend through REST APIs.

Currently, the initial set of API endpoints being designed will support user onboarding, opportunity discovery, and application tracking.

1) User Authentication APIs

POST /api/signup
- Create a new user account during onboarding.

POST /api/login
- Authenticate user and start a session.

GET /api/user
- Retrieve current user information.

2) Opportunities APIs

GET /api/opportunities
- Fetch all available opportunities for founders.

GET /api/opportunities/{id}
- Retrieve detailed information about a specific opportunity.

3) Saved Opportunities APIs

POST /api/saved-opportunities
- Save an opportunity for later reference.

GET /api/saved-opportunities
- Retrieve all saved opportunities for the current user.

DELETE /api/saved-opportunities/{id}
- Remove an opportunity from the saved list.

4) Applications APIs

POST /api/applications
- Create a new application entry when a founder applies to an opportunity.

GET /api/applications
- Retrieve all applications submitted by the user.

PUT /api/applications/{id}
- Update application status (Applied, Under Review, Shortlisted, etc.).

Mentor interaction:

Through mentor discussions, we critically evaluated existing funding platforms and identified major gaps particularly around eligibility clarity, relevance, and wasted application effort. Based on these insights, the product direction was refined with a strong focus on usability and precision.

Key outcomes from mentor interactions include:

- Identified the need for clear eligibility checks before users invest time in applying.
- Refined onboarding to capture startup stage, sector, and context, enabling AI-driven grant and opportunity recommendations.
- Shortlisted 10–15 high-impact data sources (such as DPIIT, BIRAC, MIT-linked programs, campus funds, and accelerators) for the MVP.
- Narrowed the initial target audience to students and early-stage startups to maintain focus and usability.
- Discussed integrating mentor recommendations aligned with startup stage and domain.
- Proposed separate user flows for founders and investors to avoid mixed or confusing experiences.
- Emphasised the importance of deadline alerts and notifications for newly launched opportunities.
- Suggested post-application feedback collection to continuously improve recommendation accuracy.
- For investors, explored support around schemes, TBI licenses, and fund eligibility mapping.
- Agreed on categorising opportunities using TRL / BRL levels for better stage alignment.
- Defined a long-term vision involving real-time updates as funding data refreshes.

THANKYOU!
